SUMMARY

Software Developer with commercial experience across desktop, mobile, web and backend development, building C#/.NET and SQL Server systems for industrial clients alongside Swift/Kotlin apps and React/Spring Boot platforms. I take features from build and testing through to release, alongside supporting the customers who use them, including on-site installation. Experienced in project coordination, with over 95% of projects delivered on time. Seeking a fully remote or hybrid software developer role.

PROFESSIONAL EXPERIENCE

Junior Software Developer

Individual Systems Ltd, Alcester, Warwickshire

February 2026 – Present | On-site

Individual Systems builds weighing, stock management and process automation software for the grain store, agriculture and manufacturing sectors.

I develop features end to end at Individual Systems, from C# WinForms desktop front ends to Microsoft SQL Server back ends, including stored procedures, queries and database design, all in Visual Studio. I test and debug changes before merging and releasing them into the main development pipeline using Git. I also build and maintain SSRS reports in Report Builder for clients' operational and stock reporting.

Much of my work connects software to real-world hardware. I integrate our systems with weighing equipment and control cabinets over serial (RS232/RS485) and TCP/IP communications. I also visit customer sites to install and configure systems, connecting the software to control cabinets and on-site hardware.

Beyond development, I act as a point of contact for customers. I diagnose their issues, scope new developments, and work with senior developers to get them resolved.

Junior Software Developer

Our Training Department, Birmingham, England, United Kingdom

February 2025 – February 2026 | Hybrid

As my unique Software Developer role working through The Random Stuff directly for OTD, I contribute directly to the development of the LPA and Carpe Diem training and learning applications. These platforms prepare users for workshops through in-app learning materials and one-to-one coaching.

I guided these applications from initial planning through to deployment and ongoing maintenance. I work to keep things running smoothly for over 500 active LPA users while ensuring programme content reaches them reliably. Throughout this work, I leverage Generative AI tools such as Claude and Cursor to boost coding efficiency and streamline development.

I also develop and maintain the LPA admin portal and backend services using a custom Spring Boot server, building new features and keeping systems stable with 99% uptime. Beyond the code, I support users directly through troubleshooting issues and making sure everyone has a seamless experience across all platforms.

Junior Software Developer & Project Manager

The Random Stuff, Birmingham, England, United Kingdom

February 2025 – February 2026 | Hybrid

With a unique role as a Software Developer and Project Manager developing for OTD while managing projects across The Random Stuff. I focus on setting clear priorities that align with what our customers actually need.

On the project management side, I coordinate tasks, keep timelines on track, and support the development team to maintain steady progress. I bridge communication between stakeholders and developers, making sure everyone's on the same page and requirements are clearly understood.

This approach has helped deliver over 95% of projects on time while keeping the team aligned and customers satisfied.

Full-Stack Developer

The Random Stuff (Self-employed), Watford, England, United Kingdom
November 2024 – January 2025 | Remote

Delivered customized full-stack applications using modern frameworks, building both client-side and server-side components that consistently exceeded expectations reflected in 100% client satisfaction and repeat business.

Maintained reliable, high-performing applications through thorough testing and deployment strategies, achieving zero post-launch critical issues by following industry best practices with modern development tools.

Full-Stack Web Developer

Self-employed, Watford, England, United Kingdom

August 2024 – November 2024 | Remote

Created seamless user experiences across all devices phones, tablets, laptops, and desktops by implementing responsive design with React.js and Next.js frameworks.

Achieved 100% email delivery reliability by developing and debugging the complete data transfer system from front-end to back-end, with comprehensive testing that eliminated potential error's.

Delivered the complete Bespoke Memories website from concept to launch, managing design, development, testing, and deployment to successful client approval.

Back-End Web Developer

The Random Stuff (Self-employed), Hertfordshire, England, United Kingdom

June 2024 – August 2024 | Remote

Built robust backend infrastructure with Firebase and Firestore, enabling seamless real-time data synchronization through secure authentication protocols and efficient database management.

Integrated Stripe payment systems with API connections, achieving secure payment processing.

Optimized application performance by streamlining data transfer between front-end and Firebase server, reducing latency and improving load times through efficient database queries and storage retrieval.

TECHNICAL SKILLS

• Languages: Swift, Kotlin, JavaScript, C#, Java, T-SQL, SQL

- Frameworks & Libraries: React.js, Next.js, .NET Framework, WinForms, Spring Boot
- Backend & Databases: Firebase, Firestore, Node.js, Xano, MongoDB, Microsoft SQL Server
- Tools & Services: Stripe Payment Integration, Git/GitHub, Generative AI, Claude AI, Cursor IDE, SSRS / Report Builder
- Integration**:** RS232 / RS485 serial, TCP/IP
- Methodologies: Agile Development, SOLID Principles, Full Software Development Lifecycle (SDLC)

EDUCATION

Upper Second Class Honours (2:1), Computing BSc (Hons) , University of Worcester, Worcester

September 2021 – June 2024

160 UCAS Points, Level 3 Extended Diploma in Computer Science, West Herts College, Watford

September 2019 – June 2021
